678.855.6116

THE REALME SUITE

- Strong Authentication
- Streamlined PKI Key Distribution
- Content Protection
- Federated Identity
- Digital Signatures

KEY BENEFITS

- Strong, bi-directional authentication
- Low-cost, highly effective security
- Multi-application technology
- Extremely user and site-friendly
- Protect data at-rest and in-motion
- Distribute RSA key pairs for web apps

Secured By

OUR COMPANY

Headquartered in the Advanced Technology Development Center on the Georgia Tech campus in Atlanta, Georgia, GlobalCrypto was founded in 2006 by security executives and experienced entrepreneurs to make cryptographic web security affordable and extremely user-friendly.

OUR TECHNOLOGY

Until now, cryptographic security was out of the question for most Web applications. Deemed too expensive for Web owners and too complex for end-users, cryptographic security solutions were primarily used by the government, defense contractors and ultra secure sites.

Now GlobalCrypto has made cryptographic security affordable and user-friendly by concealing cryptographic data inside digital images. This process, known as steganography, now makes exchanging secure cryptographic information between a Web application and a user as easy as sending an email.

GlobalCrypto's RealMe encryption software can be used a number of ways to help web sites authenticate users, protect content and digitally sign documents.

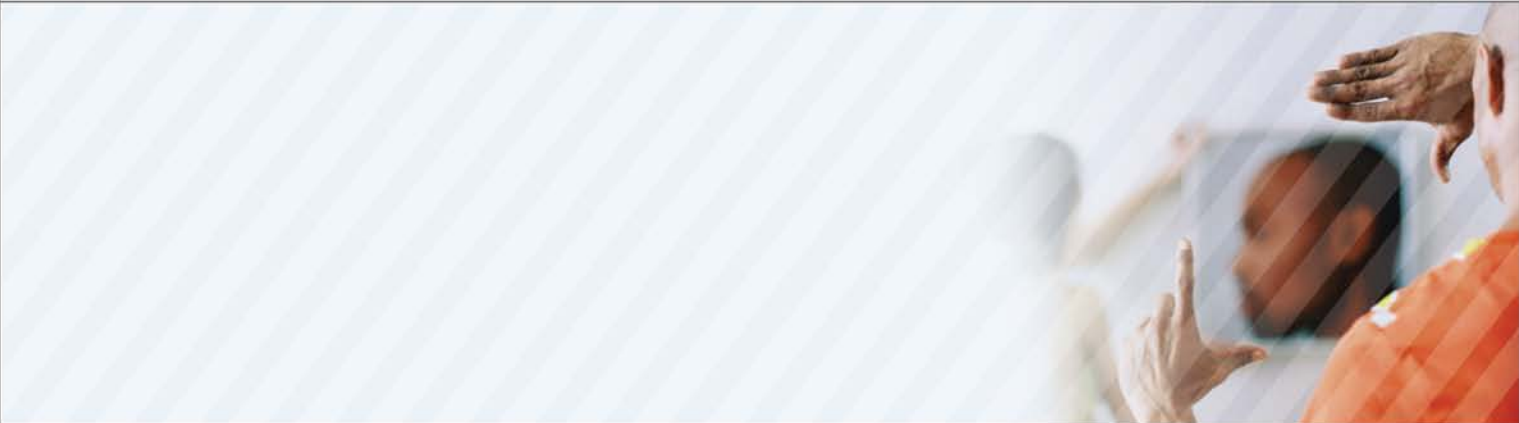

OUR TEAM

Our executive team brings together experienced entrepreneurs and security experts.

- Todd Merrill, Chief Executive Officer
- Bill Barrington, Chief Architect
- Frank Maiolo, CTO
- Steve Youngblood, Business Development

The company is privately held and recently closed a round of funding led by Imlay Investments, Inc. and Ridgewood Advisors.
