

Encrypted File Transfer for PCI

GlobalCrypto

75 5th Street NW, Suite 203
Atlanta, Georgia 30308
info@globalcrypto.com
678.855.6116

THE REALME SUITE

- Strong Authentication
- Streamlined PKI Key Distribution
- Content Encryption
- No software to install
- Digital Signatures

KEY BENEFITS

- Encrypt data at-rest and in-motion
- Strong, bi-directional authentication
- Clientless web application
- Confirmed message delivery
- No IT capital expense
- Web-Mail user experience

Secured By

INTRODUCING BUNKERMAIL FOR AD-HOC FILE TRANSFERS

Until now, ad-hoc file transfers in a PCI environment used complex software or dedicated hardware, required IT buildout or resorted to old technology such as couriers or faxes.

Now GlobalCrypto has made secure ad-hoc file transfer as simple as using web-based email. Users sign up for an account using their existing email for notifications and then use the BunkerMail website to send and receive encrypted messages from anywhere on the internet.

GlobalCrypto's strong encryption software ensures that your employees and partners remain PCI compliant by encrypting data at-rest as well as in-motion. Through full audit trails you will also know that your messages got delivered and opened.

Best of all, BunkerMail is fully web based and doesn't require users to install software on their machines. Moreover, because it is offered as a Service on the internet there is no impact on IT schedules or capital budgets.

HIGH SECURITY FOR AD-HOC FILE TRANSFER

BunkerMail is powered by the RealMe cryptographic suite which provides strong encryption for data-at-rest as well as data-in-motion. Your data is encrypted before it leaves your computer and is only decrypted once it gets delivered to the recipient's machine within the BunkerMail web application.

Users are uniquely credentialed and strongly authenticated through a simple yet strong cryptographic procedure which ensures that phishing and Man-In-The-Middle attacks are thwarted.

Rest assured that your data is safe in our SAS-70 Level II audited data center.

Ensure PCI compliance for ad-hoc file transfers outside of your company without alienating your back-office and without impacting IT schedules.

RETURN RECEIPT ON DELIVERY

Prove that your information got delivered to all the recipients promptly and fully intact. BunkerMail calculates digital signatures over all messages and clearly indicates which messages were delivered unaltered and were opened by the intended recipient.

SIMPLE TO TURN ON

BunkerMail is a pure web application which means there is no software for your users or partners to install. Furthermore, there is no server to install or maintain so your IT capital budget and roadmap are unaffected.

Start using [BunkerMail](#) now—it only takes one minute!
